## TrilliumSeries Adiabatic Condenser - Mee

# Adiabatic cooling

### Key benefits

- High thermal performance
- Saving water
- Top hygiene control

#### TVC, TrilliumSeries characteristics

Counter flow, adiabatic pre-cooling, axial fan, induced draft

#### **Capacity range**

340 - 1030 kW

#### **Typical applications**

- Small to medium industrial refrigeration applications
- Locations with limited water and space availability

#### **Boosting high thermal performance**

- Pads in front of the finned coil pre-cool air to virtual wet bulb temperature.
- Up to 40% improved capacity compared to dry cooling.
- TVC condenser consumes less energy.
- TVC condenser achieves low process temperatures.

#### **Saving water**

• TrilliumSeries condensers **achieve annual water savings exceeding 80%** water compared to normal water cooled condensers by limited adiabatic operation.

#### Top hygiene control

- Featuring a **once-through system**: recirculation and stagnation of water eliminated.
- No stagnant water: pre-cooler water conveyed from pads to sewer via a gutter.
- No aerosol formation: TrilliumSeries condensers minimize the Legionella risk.
- TrilliumSeries condensers cool incoming air without transferring water to the dry coil

Interested in the TVC TrilliumSeries condenser for your refrigeration project? Contact your local <u>BAC representative</u> for more information.
